Quarterly Commentary

Portfolio Review

Earnings strength upside was offset by multiples contraction. Non-U.S. developed markets finished slightly positive in the third quarter. Strong business performance and an unprecedented level of earnings growth continued through the period. However, rapidly rising interest rates led to contracting earnings multiples, which tempered equity gains. From a style perspective, value outperformed growth.

Notable shifts occurred beneath the market's surface. While broad performance was relatively flat in non-U.S. developed markets, a major leadership reversal took place during the quarter. Investors rotated back into areas of the market supported by expanding artificial intelligence capital expenditure, which seemed to provide the best support for continued earnings growth.

Positioning within financials was a source of weakness. Within the banking industry, our underweight exposure to Mitsubishi UFJ Financial Group relative to the benchmark was a drag on performance, and Societe Generale underperformed as profit-taking and concerns about French fiscal policy pushed shares lower. Insurance industry holdings also weighed on results, as did the portfolio's overall underweight financials sector exposure.

Communication services was a drag. Positioning within the wireless telecommunications industry was the primary cause of underperformance in the sector compared with the benchmark as our underweight SoftBank Group position detracted. Overall underweight exposure to the group also hurt relative returns.

Stock selection within utilities was a source of strength. Electric utilities holdings were the primary driver of outperformance in the sector compared with the benchmark.

Key Contributors

Ryohin Keikaku. This Japan-based household and consumer goods retailer saw its share price rise after it reported solid quarterly results and raised its full-year outlook. The company's earnings improvement stemmed from enhanced internal production, reduced discounts and solid cost controls.

Kioxia Holdings. The portfolio does not hold shares of Kioxia Holdings. Given its position in the benchmark and underperformance during the period, our lack of exposure contributed to relative performance.

Kyushu Electric Power. The company reported positive results during the quarter but was delisted from the exchange on September 29 as part of its transition to a holding company structure. Shares are no longer owned in the portfolio.

Key Detractors

ARM Holdings. The company's stock sold off primarily due to profit-taking as the market broadly rotated away from artificial intelligence beneficiaries. Investors questioned whether expectations have exceeded near-term earnings potential in the space. However, we believe the long-term thesis for ARM remains intact.

Shell. The portfolio does not hold shares of Shell. As the company's stock rallied with higher oil prices, our lack of exposure was a drag on relative performance.

Goal and Strategy

Long-term capital growth by investing primarily in large companies in developed countries outside the U.S.

The holdings listed should not be considered recommendations to purchase or sell a particular security. Equity holdings are grouped to include common shares, depository receipts, rights and warrants issued by the same company. Fund holdings subject to change.

Aritzia. Shares of the Canada-based fashion company were lower in the quarter primarily due to Canada-U.S. trade tensions and sector-wide retail headwinds. However, Aritzia continues to report strong underlying business momentum driven by same-store growth and store expansion as it has capitalized on a quiet leisure trend.

Notable Trades

MS&AD Insurance Group Holdings. This company is transitioning from a domestic Japanese insurer into a more globally diversified financial services platform. The combination of improving Japanese pricing conditions, higher investment rates of return and increasing overseas earnings contribution has created a favorable earnings setup.

Mitsubishi UFJ Financial Group. The company's earnings profile is undergoing a structural shift as Japan exits decades of ultralow interest rates. We believe rate normalization, accelerating loan growth and corporate governance reforms create a rare setup where earnings and valuation multiples can rise simultaneously.

FANUC. We exited our position after a strong rerating had largely reflected our anticipated growth opportunities. While the long-term outlook remains constructive, we see an increased risk of earnings estimate revisions as supply chain constraints persist and new order momentum continues to moderate.

SoftBank Group. We exited our position due to concerns around the scale and risk of the company's artificial intelligence (AI)-related capital commitments. SoftBank continues to increase its exposure to OpenAI, AI infrastructure and large-scale data center projects that require substantial funding.

Portfolio Positioning

The portfolio continues to invest in companies we believe are strong and improving but whose share price performance does not fully reflect these factors. Our process is based on individual security selection, but broad themes have emerged.

More balance in sector exposures relative to the benchmark. Our process focuses on individual companies showing strong business deliverables, earnings inflections and sustainable growth. Broadening market leadership presented a wider set of new opportunities. From a sector perspective, this brought more balance to the portfolio's sector exposures, which also helps to mitigate some risk in a volatile environment.

Artificial intelligence (AI) enablement remains a powerful driving force. Capital expenditure related to AI has become a granular theme and a powerful driver of growth across sectors. As the largest cloud services hyperscalers have revised their capital expenditure plans upward, an expanding set of industries and businesses has begun to participate in the AI story. This includes raw materials producers and processors, as a massive amount of raw materials will be required for build-outs.

Macro environment continues to support selective opportunities in banks. We remain constructive on select opportunities in the banking industry. As loan growth inflects in various regions, banks appear well positioned for earnings growth. Additionally, net interest income has grown, and excess liquidity is rolling into higher interest rates as loans mature. The banking industry should also be a primary beneficiary of efficiency gains through the implementation of new technology and software.

Unique growth opportunities in transformational consumer businesses. Consumer-related portfolio holdings focus on companies adapting to changing preferences, including healthier products, new formats and innovative ingredients.

Factory automation presents a tailwind for industrials. Demand for AI-integrated processes and robotics has increased as businesses move to factory automation. Companies in numerous industries are poised to benefit from new applications.
