The views expressed are the opinion of Sands Capital and are not intended as a forecast, a guarantee of future results, investment recommendations, or an offer to buy or sell any securities. The views expressed were current as of the date indicated and are subject to change. Past performance is not indicative of future results. Differences in account size, timing of transactions and market conditions prevailing at the time of investment may lead to different results, and clients may lose money. A company's fundamentals or earnings growth is no guarantee that its share price will increase. Forward earnings and revenue projections are not predictors of stock price or investment performance, and do not represent past performance. Characteristics, sector (and regional, country, and industry where applicable) exposure and holdings information are subject to change and should not be considered as recommendations. The specific securities identified and described do not represent all of the securities purchased, sold, or recommended for advisory clients. There is no assurance that any securities discussed will remain in the portfolio or that securities sold have not been repurchased. You should not assume that any investment is or will be profitable. There is no guarantee that Sands Capital will meet its stated goals.

All investments are subject to market risk, including the possible loss of principal. Recent tariff announcements may add to this risk, creating additional economic uncertainty and potentially affecting the value of certain investments. Tariffs can impact various sectors differently, leading to changes in market dynamics and investment performance. International investments can be riskier than US investments due to the adverse effects of currency exchange rates, differences in market structure and liquidity, as well as specific country, regional and economic developments. The strategy's growth investing style may become out of favor, which may result in periods of underperformance. In addition, the strategy is concentrated in a limited number of holdings. As a result, poor performance by a single large holding of the strategy would adversely affect its performance more than if the strategy were invested in a larger number of companies.

The Global Industry Classification Standard ("GICS") was developed by and is the exclusive property and a service mark of MSCI Inc. ("MSCI") and Standard & Poor's, a division of The McGraw-Hill Companies, Inc. ("S&P") and is licensed for use by Sands Capital Management, LLC. Neither MSCI, S&P nor any third party involved in making or compiling the GICS or any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim express or implied warranties or representations with respect to any such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P, any of their affiliates or any third party involved in making or compiling the GICS or any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Global Growth

Global Growth takes an unconstrained approach to seeking the best growth businesses anywhere. With the research team free to scour all pockets of the world incubating new ideas, the Global Growth strategy taps into the power of sustainable competitive advantages in both developed and emerging markets.

Investment Criteria

1. Sustainable above-average earnings growth
2. Leadership position in a promising business space
3. Significant competitive advantage/unique business franchise
4. Clear mission and value-added focus
5. Financial strength
6. Rational valuation relative to the market and business prospects

Third Quarter 2026 Commentary

Market Environment

Global equities ended 2026's third quarter modestly higher despite a turbulent operating and market environment. The quarter opened with a sharp sell-off in July, when the PHLX Semiconductor Sector Index posted its largest monthly drop in history outside the dot-com bubble and global financial crisis. Macroeconomic pressures also returned as global government bond yields and energy prices surged, while concerns about AI progress, competition, and security further unsettled investors. Meanwhile, a strong second-quarter earnings season pointed to continued corporate strength, with U.S. companies delivering more than 50 percent earnings growth year over year. Sell-side analysts expect the third quarter to mark a third consecutive quarter of growth above 25 percent.

Value outperformed growth in the third quarter, with the MSCI ACWI Value Index outperforming the MSCI ACWI Growth Index by more than 4 percentage points. Information technology was the largest sector contributor to the MSCI ACWI, followed by energy. Within the sector, industry returns highlighted the quarter's dispersion and leadership shift, with software up nearly 30 percent and semiconductors down more than 3 percent. Industrials and consumer discretionary were the key sector detractors.

Geographically, U.S. stocks were the standout, outperforming both developed markets outside the United States and emerging markets. This was the first quarter since 2024 that the S&P 500 Index outperformed the MSCI Emerging Markets Index.

Investment Results and Attribution

Global Growth underperformed the MSCI ACWI in 2026's third quarter. Select cloud and commerce software businesses held at large active weights contributed to relative results, as investors increasingly viewed them as AI beneficiaries. Select financial infrastructure holdings also contributed to positive security selection within the financials sector. However, the portfolio's exposure to the AI infrastructure value chain was a key relative detractor amid the industry's broader pullback during the quarter. The underweight to value-oriented sectors such as energy, industrials, and materials also weighed on relative results, along with the avoidance of certain mega-cap technology businesses.

Overall, the U.S. and Canada was the top-contributing region to Global Growth's relative results, while Emerging Asia was the top detractor. From a sector perspective, consumer discretionary and utilities were the top relative contributors, while communication services and industrials were the top detractors.

The top absolute individual contributors were NVIDIA, Cloudflare, Shopify, Intercontinental Exchange, and Lenskart Solutions.

NVIDIA was a top contributor as strong second-quarter results and a raised outlook lifted expectations across AI infrastructure. Revenue and adjusted earnings per share exceeded consensus, and Data Center revenue grew 117 percent year over year. More notably, management guided to roughly 70 percent revenue growth for fiscal 2028, well above the 44 percent consensus estimate entering the quarter. It also noted that customer forecasts point to demand nearly doubling next year. NVIDIA expects to capture only a portion of that demand because of supply constraints, which reinforces our view that AI infrastructure demand is larger and more durable than the market appreciates. Management also pointed to growing adoption of its central processing units (CPUs). Grace, its data center CPU, generated more than $5 billion in revenue over the trailing 12 months, and management expects CPU revenue to more than double in fiscal 2028. Late in the quarter, NVIDIA announced the largest single stock buyback authorization in history, which we believe reflects management's confidence in both the business' opportunity and the attractiveness of its valuation. We maintain our conviction in NVIDIA, underpinned by its leading architecture and ecosystem and by its expanding role across training, inference, and agentic AI workloads.

Cloudflare operates a network that functions as the internet's security layer, traffic router, and delivery infrastructure. With agentic traffic now accounting for more than 50 percent of the company's network traffic, we view Cloudflare as a beneficiary of agentic proliferation and AI use cases requiring edge computing. We are also encouraged by continued execution and progress toward GAAP profitability. Year-over-year revenue growth accelerated in the most recently reported quarter, and full-year guidance rose by more than the beat. Strength was broad across product areas, and new deal announcements reflected larger engagements and greater use of Cloudflare's Workers platform, which enables building and running applications on its network. Enterprise momentum was evident in revenue growth from customers spending more than $100,000 annually, up 40 percent year over year. Management's guidance implies

operating margin improvement in the second half of 2026, with GAAP profitability expected by 2028. Looking ahead, we believe more consumption-linked revenue, combined with prudent guidance, could set Cloudflare up for larger quarterly beats than it has delivered historically.

Shopify is the leading global ecommerce platform enabling the next generation of retail. Shares advanced following strong second-quarter results and growing evidence that the company is well positioned to benefit from advancements in consumer AI agents. Revenue and gross merchandise volume both grew more than 30 percent year over year despite difficult comparisons, while margins continued to improve. Importantly, AI-driven traffic and orders to Shopify stores tripled, with AI-assisted shopping generating higher conversion and helping consumers discover products from smaller merchants across Shopify's long tail. On the merchant side, adoption of Shopify's AI tools also continued to expand, helping businesses operate and analyze their stores more efficiently. We maintain conviction that Shopify's scale, merchant ecosystem, and expanding AI capabilities can reinforce its competitive position and support continued profitable growth.

Intercontinental Exchange is a leading provider of financial market infrastructure, spanning global exchanges, clearinghouses, fixed income data, and mortgage technology. Second-quarter results showed growth across multiple business lines, easing concerns over competitive threats from AI that had affected the shares earlier this year. Net revenue increased 5 percent year over year, led by Fixed Income and Data Services, which grew 8 percent on strong demand for pricing data and connectivity. Mortgage Technology grew 5 percent year over year, with modest sequential acceleration in recurring revenue. Importantly, these had been seen by investors as the segments most at risk from AI competition. Exchange growth moderated against a difficult comparison but remained healthy and should benefit from recent oil and rate volatility. Finally, Intercontinental Exchange acquired MarketAxess, an electronic trading platform for global institutional fixed income markets. This adds a large institutional client base and liquidity pool for the company's fixed income business and expands it into multiple new credit markets. We expect it to be highly synergistic with Intercontinental Exchange's fixed income data business.

Lenskart Solutions is India's largest eyewear retailer by volume and value market share. First-quarter fiscal 2027 results confirmed our previously non-consensus constructive view on Lenskart's international business, which delivered 20 percent same-store sales growth year over year at an 11 percent EBITDA margin. While the core India business fell short of our optimistic volume projections, better-than-expected gross margins offset the miss, and the launch of $5 prescription eyeglasses should improve conversion rates following free eye examinations. Lenskart ended the quarter with 2,725 stores in India, and management sees opportunity for 10,000 more over the next several years. To execute on this opportunity, Lenskart is building capabilities to deliver a strong customer experience at scale. This includes offering $5 prescription lenses to capture first-time customers, building supply chain capabilities to reach new towns, and deploying self-tests and remote optometry to address the shortage of trained optometrists.

The top absolute individual detractors were SK hynix, Axon Enterprise, AppLovin, ASML Holding, and Builders FirstSource.

SK hynix is the world's market-share leader in high-bandwidth memory production. Shares fell sharply in July amid a reversal in high-momentum names before partially recovering in August and September. Second-quarter results also pressured shares, as revenue and earnings were modestly below consensus. We view the miss as less concerning, as it largely reflected mix and timing. A portion of high-bandwidth memory shipments shifted from the second into the third quarter, while a heavier mobile memory mix diluted average selling prices. In our view, SK hynix's multiyear supply agreements are more consequential than the quarter itself. We believe they can sustain elevated margins for longer, dampen the industry's boom-bust cycle, and enable share repurchases that we do not believe sell-side estimates yet reflect. Management also announced a shareholder return plan, targeting more than 50 percent of cumulative free cash flow from 2025 to 2027 for dividends, repurchases, and cancellations. Consensus estimates for 2027 and 2028 earnings rose 4 percent and 12 percent, respectively. Shares ended the quarter at 4 times forward earnings, close to all-time lows.

Axon Enterprise develops connected hardware and cloud-based software solutions for public safety, including TASERs and body cameras. During the quarter, Axon contended with a number of sentiment-related issues that overwhelmed otherwise strong business results. These included souring public opinion on a competitor's surveillance cameras, concerns about growth durability following World Cup-related demand, and a debt offering. In our view, these issues obscured several positive fundamental developments. TASER growth accelerated both quarter over quarter and year over year, with TASER 10 booking more units in the second quarter than TASER 7 sold over its entire lifetime. Both enterprise and international bookings approximately tripled year over year, with its AI Era public safety software subscription package delivering 700 percent growth. Three

of Axon's largest AI Era deals came from customers outside the United States. Net retention in the quarter was 126 percent, and future contracted bookings were up a record $4.4 billion. Axon guided to deliver full-year revenue growth in the 32 percent to 34 percent range at a 25.5 percent adjusted EBITDA margin.

AppLovin is a digital advertising and app monetization platform for mobile games. Second-quarter results fell short of expectations, which management attributed to a lighter model-release quarter that drove gaming weakness. This marked AppLovin's first miss versus the high end of guidance since becoming a public company, fueling investor concerns about its growth durability and competitive position. We see a wide cone of outcomes for the business' trajectory but remain comfortable with our continued small position, supported by three factors. First, the third quarter of 2026 could serve as a clearing event, as our Meta Platforms research suggests a delay in re-entering traffic outside Apple's identifier for advertisers, which could ease the second-quarter shortfall. Second, ecommerce advertiser performance appears to be gradually improving, as measured by return on ad spend. Third, we believe valuation is undemanding at 16 times forward earnings, near its all-time low as a public company.

ASML traded lower in July alongside semiconductor-related businesses more broadly. Later in the quarter, news of an emerging Chinese state-backed lithography maker sparked a decline, and the threat of additional export restrictions on equipment sales to China also weighed on investor sentiment. We looked past the stock's fluctuation this quarter and continue to own the business at a large absolute and relative weight. The business maintains its chokepoint position in the leading-edge chip fabrication value chain, with most of 2027's production already reserved and bookings extending into 2028. This suggests to us that ASML's planned capacity ramp is backed by real customer demand rather than speculative orders. During the quarter, ASML also announced commitments from chipmakers to use 12-inch photomasks for advanced-node production into the early 2030s, in collaboration with Taiwan Semiconductor. We view this as a further positive indicator of demand durability and technological leadership. While competition from China is worth monitoring, we estimate that its production and technological capabilities remain meaningfully behind ASML's and are likely to largely address domestic demand only. Meanwhile, China now accounts for the smallest percentage of ASML's overall sales since 2022.

Builders FirstSource is the largest U.S. supplier to professional homebuilders by revenue. Its stock declined in the third quarter alongside homebuilding stocks more broadly, as mortgage rates rose in tandem with U.S. Treasury yields. To reflect the challenging interest rate and consumer sentiment environment, management lowered 2026 EBITDA guidance. Our long-term investment case is not a call on interest rates. We still expect more than $3 billion in EBITDA in 2030, with Builders FirstSource gaining more share, improving its value-added sales mix, and competing against a narrower field. That said, the near-term direction of rates greatly influences earnings estimates and the stock. We continue to debate the merits of Builders FirstSource's differentiated growth profile versus its sensitivity to near-term rates, which also influence valuations in other areas of the portfolio.

Portfolio Activity

Global Growth completed the purchases of Palantir Technologies and Woodward. These purchases were funded by trimming businesses where multiple expansion had resulted in a less attractive risk/reward profile and where our relative conviction had weakened.

There were no sales completed during the quarter.

Palantir Technologies builds the data infrastructure that enterprises and governments use to put AI to work in complex operations. We believe the business benefits from enterprise AI adoption and defense modernization because its software connects fragmented data, models how an organization operates, and turns insights into actions. Foundry integrates data from disparate systems into Palantir's Ontology, which maps the objects, relationships, permissions, and workflows that define an organization. This creates a dynamic representation of operations that users can analyze, automate, and update in real time, including through scenario analysis that can reveal how disruptions affect interconnected systems. AIP extends this foundation by allowing customers to deploy any AI model into workflows and build agents while maintaining access controls, auditability, and data governance. Palantir can operate across cloud, on-premises, edge, and disconnected environments, making it suitable for highly sensitive workloads. Its security credentials are particularly differentiated. Palantir is among a small group of technology companies with Department of Defense Impact Level 6 authorization, which allows its cloud offering to support the handling of classified information in accredited environments.

Woodward is a leading designer and manufacturer of fuel control systems for aerospace and industrial engines. Its technology regulates fuel delivery, making its products mission-critical, and its switching costs are high enough that replacing them requires an airframer to redesign and

recertify the engine. This has made Woodward the sole source across most of its platforms. Woodward has also methodically moved up the value chain, from component supplier to systems provider, displacing incumbent suppliers in the process. On each new engine platform, the dollar value of parts it sells has grown substantially, in some cases by as much as nine times what it sold on the prior generation. We believe this positions the business for a structural, multidecade inflection in aerospace aftermarket revenue, as next-generation engines such as LEAP and GTF enter their first heavy maintenance cycles and demand compounds for years as the installed base matures. Because aftermarket work carries Woodward's highest margins, we expect the shift in engine mix toward these newer platforms to drive earnings growth that outpaces revenue growth, reinforcing both Woodward's competitive position and its financial profile over a multiyear horizon.

We took advantage of a valuation opportunity to initiate a position in a business operating in an attractive industry, providing the portfolio with a differentiated earnings driver. The stock fell after Woodward reported second-quarter 2026 results, as the company trimmed the high end of its aerospace sales guidance. We were not concerned, as the trim was due to a one-time contract adjustment. We believe the market underappreciates the sales and margin opportunity from the aerospace aftermarket inflection, as well as the industrial pricing power tailwind.

Outlook

We continue to invest in a market that seems increasingly short-term and skittish, one that often moves for reasons that have little to do with what a business is worth. Passive vehicles allocate by index weight rather than judgment, thematic funds concentrate capital around a single story, and leverage accelerates the swings in both directions. As more money trades on flows, factors, and narratives, prices detach from underlying value more frequently and more violently.

We believe this environment, uncomfortable as it feels in the moment, favors investors willing to do the opposite. The index has done well, but it is built by looking backward: rebalancing mechanically and with a lag, adding leadership after it is established, and shedding it after it has broken.

The AI trade itself has grown more complicated, shaped by technological, corporate, and geopolitical developments in combination rather than any one of them alone. Investors continue to debate whether current capital spending is sustainable and how quickly it will translate into returns. This is where we believe discretion matters most, in what we choose to own today and how quickly we can act for tomorrow. We are already seeing signs of AI monetization within our own portfolio, and in many cases these signs are emerging in businesses that are diluted within the index or excluded from it altogether. In a period this volatile and uncertain, we believe the case for weighing businesses individually, rather than owning the market by default, grows stronger rather than weaker.

That discretion is not commanding a premium right now. The businesses we own trade at roughly 19 times forward earnings, versus 16 times for the index, near the cheapest our approach has been in the strategy's history. Against that, our estimates imply 35 percent annual earnings growth over the next five years.

We are not being asked to pay up for discretion. We are being offered it near the lowest price we have seen.

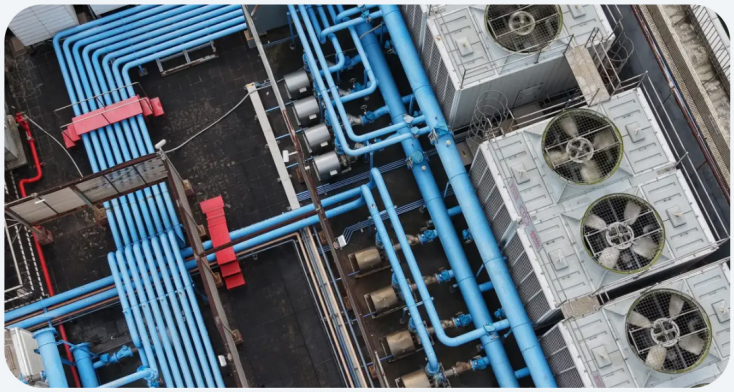

Related Perspectives

The New Power Economy

Electricity demand is rising as AI, electrification, and advanced manufacturing make the economy more power intensive, creating opportunities for businesses tied to generation, transmission, grid equipment, and on-site power.

All values are those of the Global Growth Equity Composite. The companies identified above represent a subset of current and former holdings in the Global Growth portfolio and were selected based on the performance measures presented. With the exception of IPOs where actual transacted prices are used, contributions are calculated in FactSet Portfolio Analysis using FactSet end of day prices, and do not reflect actual purchase prices. This can affect the presentation of contribution and performance of transactions amid heightened volatility. Security return and contribution are net of advisory fees and expenses and reflect the reinvestment of dividends and any other earnings. Attribution generated returns will not match actual performance because FactSet uses different exchange rate sources, the performance does not capture intra-day trading, and the analysis removes the impact of cash flows. Relative Return calculations do not incorporate risk or volatility impacts and should not be exclusively relied upon. To receive a description of the calculation methodology for the attribution analysis and a complete list detailing each holding's attribution please contact a member of the Client Relations Team at 703-562-4000. Past performance is not indicative of future results.

Carbon Exposure

Global Growth vs. MSCI All Country World Index (MSCI ACWI)
Reported September 30, 2026

Carbon Footprint

	Carbon Emissions	Carbon Intensity	Weighted Average Carbon Intensity	Carbon Emissions Data Availability
Global Growth	3.9	30.4	76.1	97%
MSCI ACWI	47.2	134.6	107.4	100%
	tCO_2e/$M Invested	tCO_2e/$M Sales		Market Value

Carbon Emissions are calculated as Scope 1 & Scope 2 carbon emissions per $1 million invested. Portfolio and Benchmark Carbon Intensity is defined as the portfolio or benchmark carbon emissions per $1 million of portfolio or benchmark sales. At a business level, carbon intensity is calculated as carbon emissions per unit of sales (tons/$ 1 million sales). Weighted averages are computed as the sum product of the portfolio or benchmark companies' respective carbon values and portfolio or benchmark companies' weights.

Proxy Voting

Proxy voting is an important part of our commitment to being an active, long-term owner and to fulfilling our fiduciary duty to act in the best interests of our clients.

Who Makes the Decision?

Voting decisions are made by members of our investment research team, those who know the business, and are typically directed by the lead analyst on the business.

What Information Do We Consider?

Our evaluation of each meeting agenda typically considers company proxy documents, our own research on the business, recent discussions with management, and third-party analysis.

While we do consider independent proxy advisers' guidance, we do not delegate our voting or rely upon such guidance in our voting decisions.

How Do We Approach Management Proposals?

Because management quality is a key criterion in identifying businesses for our portfolios, we tend to vote proxy proposals in favor of management. When we intend to vote against management, we may discuss the rationale for our decision with management.

Global Growth Voting Activity
TTM Ending September 30, 2026

Votes	Businesses	Resolutions	%
Cast in Favor of Management	38	463	95%
Cast Against Management	8	15	3%
Abstentions	2	7	1%
		485	100%

Engagement enables us to better understand management's long-term vision and discuss how they manage ESG risks and opportunities, among other issues.

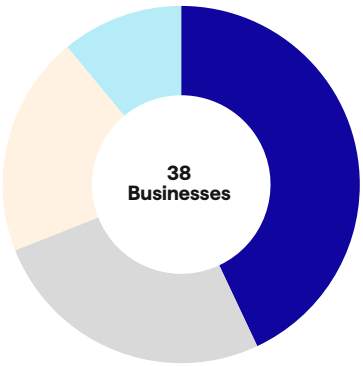

We meet regularly with the management teams of our portfolio businesses. Typically, they recognize us for our long-term investment orientation and focus on value creation.

We proactively express our views regarding business strategy, governance, financial reporting, executive compensation, and other stakeholder considerations when merited.

We are not activists and do not invest with the intention of pressuring management teams or pursuing campaigns to materially change our portfolio businesses.

We are objective and business-focused. We reserve the option to sell our shares if management is unable to address our concerns, which could reduce our conviction in the company's fit with our investment criteria.

Labor rights
Health and safety
Diversity and inclusion

Environment

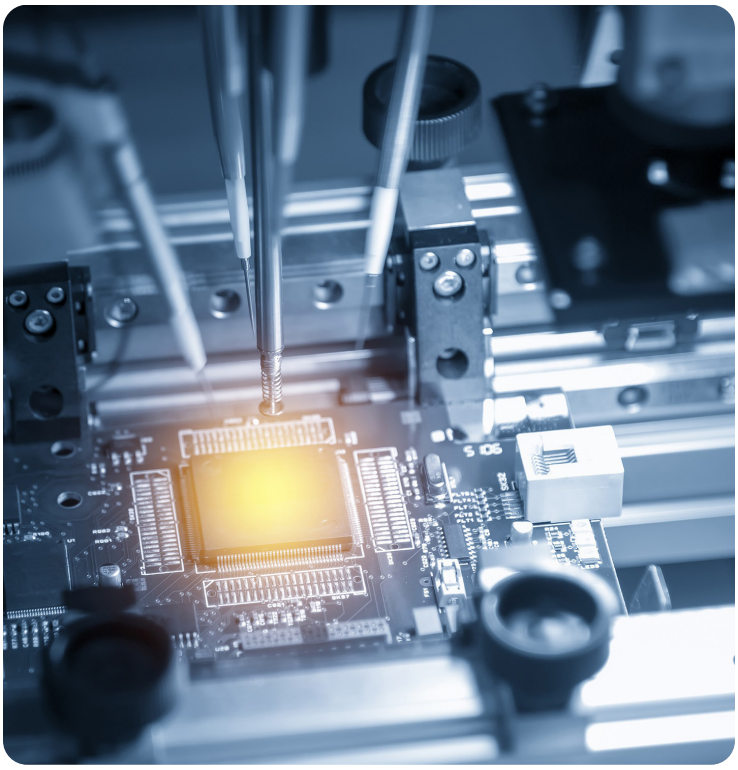

Materials use and sourcing
GHG emissions or climate change strategy
Water use and efficiency
Energy use and efficiency
Environmental policy and strategy
Regulation
Pollution and waste management

We may refrain from voting when issues arise that cause us to determine that voting proxies is not in the best interest of our clients or that it is not reasonably possible to determine whether voting proxies will be in the best interests of clients. Additionally, we do not vote in certain countries that require "share blocking," due to the possible liquidity constraints that could result in the cost of voting outweighing the benefit to the client. Shares out on loan also may not be voted. Sands Capital is not an activist investor and generally does not acquire or hold investments for the purpose or effect of changing or influencing the control of its investee companies.

As part of our ongoing research, Sands Capital regularly engages with the management teams and, if appropriate, board members of portfolio businesses to better understand each business's long-term strategic vision and management of risks and opportunities, including those pertaining to environmental, social, and governance (ESG) matters. The use of the term "active ownership" and Sands Capital's engagement with management teams and board members do not involve any direct or indirect attempt to exert pressure to implement specific measures, change policies, or otherwise influence control over the issuer.

Select Engagement Report

ASML Holding

Business:
ASML is a global market-leading supplier of lithography equipment, which uses concentrated light to imprint circuit patterns onto silicon wafers.

Key issues:
Environmental policy and strategy, energy use and efficiency, and regulation.

Background

ASML operates within a complex global semiconductor ecosystem, where commercial priorities increasingly intersect with national-security concerns and government policy. Our engagement explored how the company is adapting to these pressures, protecting the resilience of its supplier network, and pursuing its climate commitments as the semiconductor industry expands.

Adapting to geopolitical complexity

We asked how ASML balances competing stakeholder expectations and whether heightened geopolitical scrutiny has required changes to its governance or decision-making processes. The company described significant investments in its compliance capabilities in response to increasingly complex regulations and a sharp rise in related requests. These changes have required additional resources to interpret and respond to evolving requirements.

ASML also expanded its government relations team across multiple geographies. Company representatives emphasized the importance of helping policymakers understand the semiconductor industry, including the technologies, applications, and commercial relationships affected by export controls. They described sustained dialogue and education as central to navigating an increasingly political environment.

The discussion provided greater visibility into how ASML has strengthened its capacity to manage regulatory demands. ASML's response focused primarily on expanding compliance and government relations resources, providing less detail on how competing stakeholder interests are resolved within formal governance processes.

Understanding ecosystem vulnerabilities

We also asked which factors present the greatest long-term risks to ASML's broader ecosystem, including suppliers, talent, and research partnerships. The company identified its supply chain as the most immediate area of attention and geopolitical uncertainty as a significant ongoing challenge.

ASML described talent availability as a less pressing concern. The company indicated that its attractiveness as an employer in Europe continues to support recruitment and that it was not experiencing significant difficulties attracting people. This helped focus the discussion on supplier resilience and geopolitical pressures as the business' more prominent concerns at the time of the engagement.

Delivering on climate commitments

Our climate discussion examined how ASML is pursuing its sustainability ambitions alongside rapid industry growth. The company reported progress in addressing Scope 1 and Scope 2 emissions, which cover its direct operations and purchased energy. It also described constructive collaboration with customers on reducing energy consumption, supported by growing customer interest in energy efficiency.

Progress with suppliers has proved more challenging. ASML cited lower transparency and less scrutiny within its supply chain, making this an area where delivering on its climate ambitions has been more difficult. Company representatives

noted that this contrasted with their initial expectation that customer engagement would present the greater challenge.

ASML reaffirmed that sustainability remains a strategic commitment. The company indicated that it had made a deliberate decision to prioritize environmental, social, and governance considerations early on and had no intention of changing that direction.

Engagement outcome

The engagement strengthened our understanding of ASML's response to geopolitical and regulatory complexity and highlighted supplier transparency as a challenge in executing its climate strategy. It also clarified that customer collaboration has been more productive than the company initially expected. These insights provide a basis for future discussions on supplier engagement, measurable climate progress, and the governance processes supporting difficult geopolitical decisions.

This report is an example of the type of fundamental research Sands Capital conducts and, as such, contains the opinions and comments of Sands Capital at points in time. Additional or subsequent information may cause Sands Capital's views to change. This report is not a complete analysis of all material facts and therefore is not a sufficient basis alone on which to base an investment decision. This material may include summaries and references to research notes, emails, conference calls, and meetings, and there is no guarantee or representation that this information is complete, current, or accurate. The information contained herein has been prepared from sources believed reliable but is not guaranteed by us as to its timeliness or accuracy and is not a complete summary or statement of all available data. This report is for informational purposes only. As part of our ongoing research, Sands Capital regularly engages with the management teams and, if appropriate, board members of portfolio businesses to better understand each business's long-term strategic vision and management of risks and opportunities, including those pertaining to environmental, social, and governance (ESG) matters. Sands Capital's engagement with management teams and board members does not involve any direct or indirect attempt to exert pressure to implement specific measures, change policies, or otherwise influence control over the issuer. The company illustrated represents a holding in the Sands Capital strategies as of September 30, 2026, and was selected by the author on an objective basis to illustrate the views expressed in the Commentary. The example was selected based on the recent date of the engagements and topics discussed. The assessment of each business is based on factors that we believe are material to the long-term investment case. To receive a complete list of company engagements for the prior twelve months please contact a member of the Client Relations Team at 703-562-4000.

As of October 1, 2021, the firm was redefined to be the combination of Sands Capital Management, LLC and Sands Capital Alternatives, LLC (previously known as Sands Capital Ventures, LLC). Both firms are registered investment advisers with the U.S. Securities and Exchange Commission in accordance with the Investment Advisers Act of 1940, as amended. The two registered investment advisers are combined to be one firm for GIPS purposes and are doing business as Sands Capital. Sands Capital operates as a distinct business organization, retains discretion over the assets between the two registered investment advisers, and has autonomy over the total investment decision making process. Prior to October 1, 2021, the firm was defined as Sands Capital Management, LLC, is an independent registered investment adviser. Sands Capital claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Sands Capital has been independently verified for the periods February 7, 1992 through December 31, 2025. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The Global Growth Equity Composite ("GGEC") has had a performance examination for the periods December 31, 2008 through December 31, 2025. The verification and performance examination reports are available upon request. The GGEC reflects information from all fee paying and non-fee paying accounts managed in the Global Growth strategy. The Global Growth strategy is a concentrated portfolio that normally consists of the equity securities of 30 to 50 primarily large and mid- capitalization growth businesses. Portfolio companies are domiciled in both developed and emerging markets. The portfolio may invest a significant percentage of its assets in U.S. listed securities, ADRs, and foreign securities traded on foreign exchanges, and may include the use of derivative access products including Low Exercise Price Warrants ("LEPWs") and Participation Notes ("P-Notes") to gain exposure to certain foreign markets where direct investment is restricted or not always practical or cost efficient. The strategy may experience losses as it is subject to equity securities risk, market and issuer risk, selection risk, growth style risk, concentration risk, currency exchange risk, foreign company risk, derivatives risk and other economic risks that may influence the returns of this strategy. The benchmark for the GGEC is the MSCI All Country World Index ("MSCI ACWI"). The MSCI ACWI is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. The GGEC holds securities not included in the MSCI ACWI and Sands Capital may invest in securities not covered by the index. The annual composite dispersion presented is an asset- weighted standard deviation calculated of performance dispersion for accounts in the composite for the entire year, using beginning of period values. The U.S. dollar is the currency used to express performance. Returns include the effect of foreign currency exchange rates. Gross and net performance includes the reinvestment of all income and is presented net of expenses, foreign withholding taxes on dividends, interest income, and capital gains. Withholding taxes may vary according to the investor's domicile. The benchmark return is net of the maximum withholding tax rate of the constituent company's country of incorporation applicable to institutional investors. Net of fee performance was calculated by reducing the monthly gross composite return by 1/12 of the highest applicable annual fee of 0.85%. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. A list of composite descriptions, pooled fund descriptions for limited distribution pooled funds, and broad distribution funds is available upon request. Past performance is not indicative of future results. The investment management fee schedule for separate accounts is 0.85% on the first $50 million, 0.65% on the next $200 million and 0.55% on all assets above $250 million. Accounts may also pay a performance-based fee that consists of a base fee plus a percentage of the annualized excess return versus the benchmark. Additional information regarding performance fees is available upon request. Actual investment advisory fees incurred by clients may vary which will result in performance that may be higher or lower. The GGEC was created on February 26, 2009 and the inception date for performance is December 31, 2008. MSCI is the source of all MSCI data presented. The MSCI information may only be used for your internal use, may not be reproduced or redisseminated in any form and may not be used as a basis for or a component of any financial instruments or products or indices. None of the MSCI information is intended to constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such. Sands Capital

We are an active, long-term investor in leading innovative growth businesses, globally. Our approach combines analytical rigor and creative thinking to identify high-quality growth businesses that are creating the future. Through an integrated investment platform spanning venture capital, growth equity, and public equity, we provide growth capital solutions to institutions and fund sponsors in more than 30 countries. Sands Capital is an independent, staff-owned firm founded in 1992 with offices in the Washington, D.C. area, New York, San Francisco, London, and Singapore.

All-In Culture

We are one team dedicated to one mission and one philosophy. As a fully independent and staff-owned firm, we attract and retain strong talent, focus on long-term outcomes, and are highly aligned with our clients' interests.

Insight Driven

Businesses that can build a sustainable advantage are few and far between. To seek them, we apply six criteria to separate signal from noise, identify what matters most, and construct differentiated views on tomorrow's businesses, today.

High Conviction for High Impact

All our strategies concentrate investments in only our best ideas and avoid mediocrity. With the intent to own businesses for five years or longer, we seek to create value for clients through the compounding of business growth over time.

Global Perspective with Local Understanding

Innovation-driven growth knows no geographic boundaries. Neither does our research team. We are hands on, on-the-ground, deeply immersed in the ecosystems in which our businesses operate.
